- Records that contain 981 as the first three digits form the break group B
- Records in A1 are compared to records in A2, but never to records in B1 or B2
- Records in B1 are compared to records in B2, but never to records in A1 or A2

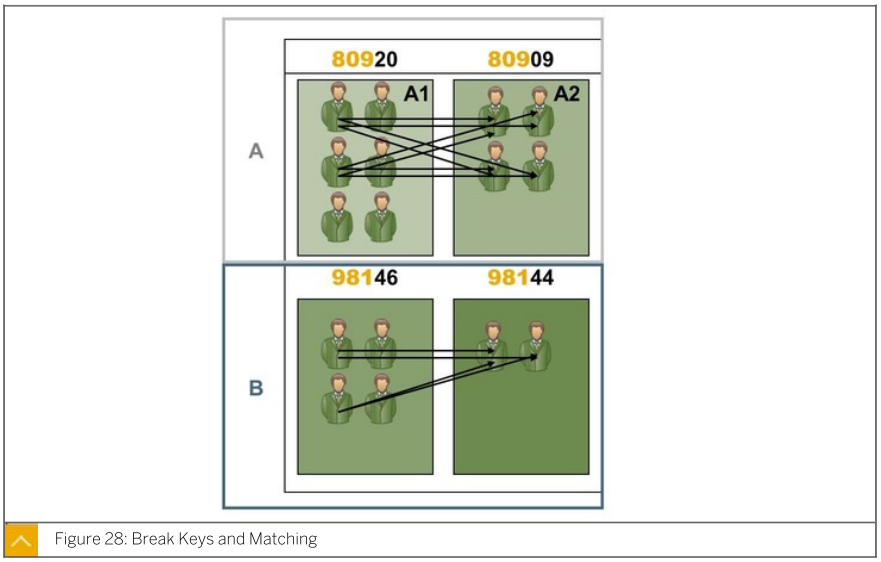

Figure 28: Break Keys and Matching

To set up matching using the Match Wizard

1. In your data flow, right-click the transform to follow with a Match transform, and choose *Run Match Wizard*.
2. Select the required match selection type.
3. Set the Match Set according to your business rules.
4. Set the criteria for Match Set Name according to your business rules.
5. Define the break keys by selecting the upstream field, setting the start position, and length.
6. Connect the Match transform to the target table.

LESSON SUMMARY
You should now be able to:

- Identify duplicate records
